

# ViewPoint Glasses

Low Vision VR system with Speech

ViewPoint is an intuitive, hands-free low vision system that uses the latest virtual reality technology to help a user regain their independence. A comfortable headset with a wide angle lens allows for a wide field of view to make the most of their remaining vision.

ViewPoint allows a low vision user to see faces of loved ones, see objects at a distance, read, write, and watch TV, all without holding a device in their hands.

- Hands-free usage
- Voice controlled
- Comfortable headset
- Adjustable Zoom
- Various Color Modes
- Integrated OCR

- Adjustable Brightness
